

# NEBULA'S CHILD

Edmund Chan  
Tan Taitien

Step in and meet the mystical Nebula's Child.

Inspired by the iconic image of the Pillars of Creation taken by NASA's James Webb Space Telescope, this suite invites you to contemplate the delicate balance between the forces of creation and destruction that shape our universe.

Upon entering, you wander into the presence of a nascent star. Brimming with energy, intense light bursts through the cracks of the star's domed surface. Its warm glow heralds fresh beginnings and vitality.

At the heart of the space erupts two swirling columns, surging the interstices with fluid yet rugged matter. Marvel at the power of the soaring structures overhead as imminent order is brought forth from the chaos. A crystalline bed awaits you in the thick of it all – the perfect vantage point to bear witness to the transcendent beauty of celestial creation.

Moving further into the depths of the space, an overwhelming, colossal void looms. The dark and mysterious funnel draws you in. A ring of light tenses on the verge. Eventually, it too will succumb to the inexorable pull of the black hole. Nothing escapes.

Before you lose yourself to the depths of the black hole, lay upon the icy bed and float away. Float through the grand interstellar space. Look toward the dawn of the young star and let the wonders of the cosmos inspire you.

-2 Snow pillars to be casted with ice block internally, and will be sculpted

1.5m Thick

1.5m Thick

"Dark Hole"

- Center funnel in

"New Star"

- Half sphere shape outwards

**View from Door side**  
**Rendered with 3D Blender**

*(Colour and lighting is not exact)*

Dark hole

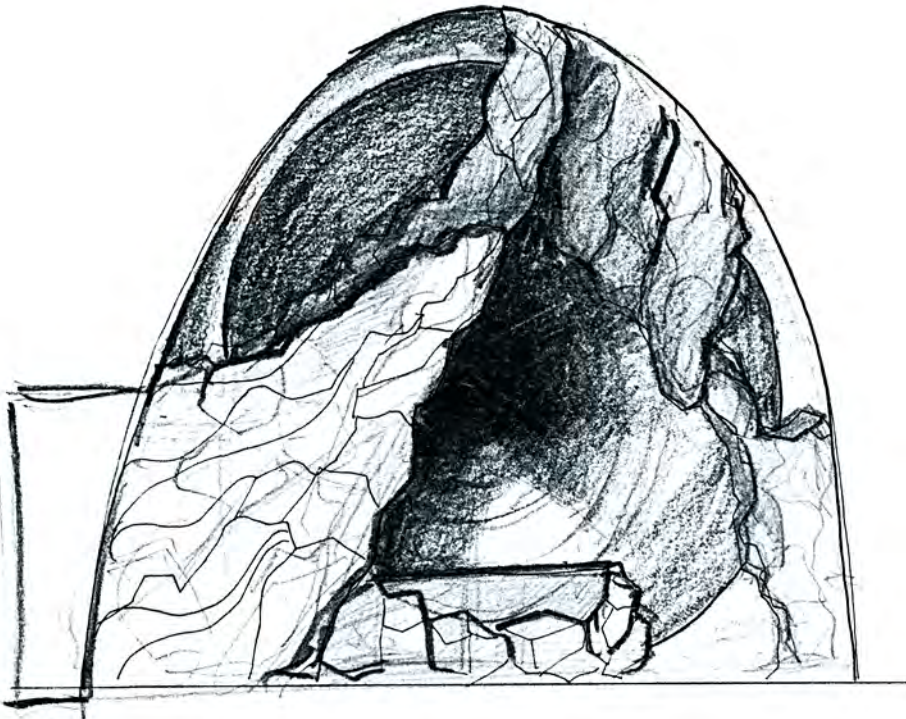

Pillars/  
Clouds of creation

New Star

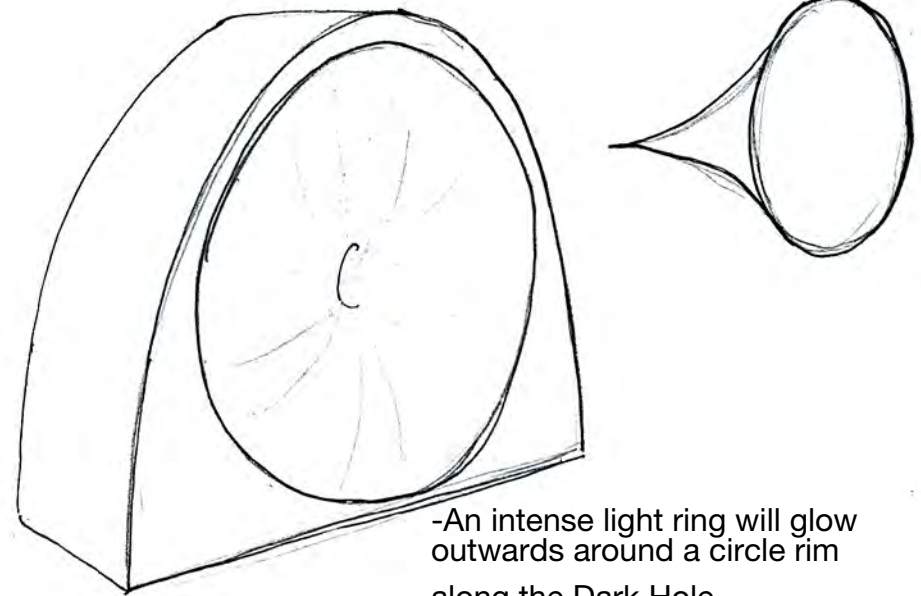

## Dark Hole

- Inspired by the dark hole in the galaxy
- Scupted on snow

Sketch of the Dark Hole with the snow pillars in front

Funnel inwards  
The center will  
look dark

-An intense light ring will glow  
outwards around a circle rim  
along the Dark Hole

-The idea is to create a bright edge  
in contrast to the dark funnel.

## Clouds of Creation

-Snow pillars sculpted out of snow and ice.

-Inspired by the Eagle Nebula "Pillars of Creation", star dust, and the natural world around us

### Base

Rocky, like large crystal, chiseled edge

### Top

Cloud-like, flowing formation

Reference img from plaster work

### Side

Long flowing lines, transition from rock to clouds, revealing a glowing ice core

Ice block placed internally in the snow wall

- To cast half a thick snow wall about 3m deep

- With ice already placed internally

## New Star

Inspired by volcano eruption, the birth of new stars, signifying creation process

Cast 1.5m thick snow

Shape out the planet  
(less than half a sphere)

Dig out deep grooves  
for lighting

Patch back the deep  
grooves and carve 'cracks  
lines' to reveal streaks of  
lights

## Star bed

We are all made of stars.

Carbon, oxygen, atoms, everything, all the matter in the universe is essentially made up of stardust.

We want the guest to sleep and remember that they are stardust themselves

- Ice 'rocks'/'crystals' to be sculpted and place after the ice bedframe is done

-Side of the rocks/crystals will be smaller and lesser for easy access for guest
